DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, drawn to a two payload decoy device, classified in class 244, subclass 137.4.
 - II. Claims 15-19, drawn to a manifold/delay body assembly, classified in class 102, subclass 489.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the payload decoy device can function without a delay assembly. The subcombination has separate utility such as a delay mechanism for fuze.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Mark Glut on 11/15/04 a provisional election was made without traverse to prosecute the invention of I, claims 1-14.

Affirmation of this election must be made by applicant in replying to this Office action.

Art Unit: 3641

Claims 15-19 are withdrawn from further consideration by the examiner, 37

CFR 1.142(b), as being drawn to a non-elected invention.

Claims 15-19 are canceled.

Allowable Subject Matter

2. Claims 1-14 are allowed.

3. The following is an examiner's statement of reasons for allowance: Upon review of the application filed on June 19, 2003 and the prior art of record no two-payload decoy device exists comprising: a square outer case having a closed aft end and an open forward end; a square payload assembly, located inside the forward end of the outer case; a round payload assembly, located inside the outer case and aft of the square payload assembly; a manifold/delay body assembly located inside the square outer case and attached to the round payload assembly, located aft of the round payload assembly, said manifold/delay body assembly having a round end located forward and a square end located aft, said manifold/delay body assembly being staked in place by deforming the square outer case inward in each of the four corners of the square end just forward of where the square corners of the manifold/delay body assembly are located inside the square outer case; and an end cap, said end cap being attached in the open end of the outer case. This statement is not intended to necessarily state all the reasons for allowance or all the details why the claims are allowed and has not been written to specifically or impliedly state that all the reasons for allowance are set forth (MPEP 1302.14).

Art Unit: 3641

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Edwards (3,295,410) teaches a a two payload decoy device comprising a square payload assembly and a round payload assembly inside a square outer case (fig. 1).
